

Rooftop Harvest!

Lesson Report

It was all color, taste and activity in Tom's class on November 25th as urban farming consultant Jon Walsh helped students enjoy the fruits of their gardening classes – their very own fresh vegetables, grown at school with no added chemicals.

Tom asked students to review what they had learnt in their urban farming program, and then to draw a garden they would like to make.

Picking and showing off their harvest.

Lunch! TIS-grown lettuce, parsley, baby leaves and more. Students also enjoyed mint tea, freshly made using their own plant.

- Urban food production & training
- Garden installation & maintenance
- Gardening demonstrations.
